DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Carroll (USP 5,130,571). Figure 4 of Carroll shows a switched capacitor circuit comprising a plurality of positive side switch elements (T24, T22) for selectively connecting a positive side first node (Vout) to a positive side second node (Vin) depending upon a control signal applied to a first control terminal (A, B), wherein the positive side first node is connected to a positive side capacitor (Cs) and when switching the capacitor circuit to an off state, sequencing the control signals such that the positive side switch elements are switched off sequentially (figure 5) as called for in claim 1.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 2, 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carroll (USP 5,130,571) in view of Tsai (USP 5,825,219).

Figure 4 of Carroll shows a switched capacitor circuit comprising a plurality of positive

Art Unit: 2816

side switch elements (T24, T22) for selectively connecting a positive side first node (Vout) to a positive side second node (Vin) depending upon a control signal applied to a first control terminal (A, B), wherein the positive side first node is connected to a positive side capacitor (Cs) and when switching the capacitor circuit to an off state, sequencing the control signals such that the positive side switch elements are switched off sequentially (figure 5). Carroll does not teach the differently sized switch elements are off in the order of largest to smallest as called for in claims 2, 11 and 12. Figure 2 of Tsai shows a plurality of differently sized switched elements (300, 320, 340) connected in parallel. The plurality of the differently sized switched elements are turned off (released) in the order of the largest to smallest transistors (340, 320, 300) in order to improve speed and minimize noise. Therefore, it would have been obvious to a person skilled in the art at the time of the invention was made to size transistor T24 of Carroll to be larger than the transistor T22 for the purpose of improving speed and minimizing noise as taught by Tsai.

Allowable Subject Matter

5. Claims 3-10 and 13-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Application/Control Number: 10/709,461 Page 4

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan T. Lam whose telephone number is 571-272-1744. The examiner can normally be reached on Monday to Friday (7:30 am to 6:00pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, TIMOTHY P CALLAHAN can be reached on 571-272-1740. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
